Trần Mạnh Cường

Mobile Developer

Dob: 03/09/2003
Gender: Male
Phone: 0981472746
Email: cuongnt392003@gmail.com
Address: Phuoc Long Ward, Ho Chi Minh City

OBJECTIVE

As an Information Technology graduate, I am seeking a challenging role as a Mobile Developer. My goal is to leverage my technical skills to build impactful, real-world products while continuously advancing my expertise in a professional environment.

EDUCATION

2021 - 2026

Thủy Lợi University
Major: Information Technology

- GPA: 2.71 / 4.0

SKILLS

React Native, Javascript, Typescript

Nodejs, Nestjs, MongoDB,MySQL, RESTful API

Docker, Git/GitHub, Postman

WORK EXPERIENCE

Sept, 2025 - Mar,2026

FPT IS Company Limited - Branch in Ho Chi Minh city
Mobile Developer Intern
Key Responsibilities:

- **UI/UX Design and Development:** Designed and built the user interface for the LightBase SuperApp across Android, iOS, and Web platforms using Expo (React Native).
- **MiniApp Ecosystem Development:** Developed an independent MiniApp ecosystem within the Host App environment via a self-built Custom SDK.
- **State Management:** Utilized Zustand for centralized Global State management, reducing re-renders and optimizing memory usage.
- **Data Optimization:** Applied TanStack Query to handle Server State, establishing Caching and Auto-refetching strategies to reduce data retrieval latency.
- **Backend Development:** Built a RESTful API system to support MiniApp services using NestJS with a Modular architecture for easy maintenance and scalability.
- **Authentication Integration:** Integrated a centralized identity solution (Logto) and implemented Single Sign-On (SSO) for a seamless login experience between the SuperApp and all MiniApps.

CRM MiniApp Maintenance:

- Took responsibility for quality control, collaborating with the Testing team to resolve system errors thoroughly before Go-live.
- Ensured system stability and timely responses to feature change requests from customers for the CRM system.

PROJECTS

- **Vietnamese Agriculture**

  Mobile Developer

  Description: A comprehensive digital solution designed to empower farmers by digitalizing cultivation logs, managing farming schedules, and providing real-time market price fluctuations for agricultural products.

  Responsibilities:

  - **Cross-platform App Development:** Leveraged Expo to deliver a unified experience on both iOS and Android, focusing on optimizing asset loading and application startup time.
  - **State Management & Data Fetching:** Architected a robust data flow using Zustand for global UI state and TanStack Query for server-state synchronization.
  - **Backend Development:** Engineered a NestJS backend with MongoDB, implementing RESTful APIs to handle user data and agricultural price updates.
  - **Deployment & DevOps:** Containerized the entire application environment using Docker to ensure consistency between development and production.
  - Successfully deployed and managed the backend system on Railway, configuring CI/CD pipelines for automated deployment and environment variable management.
  - **Tech Stack:** Expo, NativeWind, Zustand, TanStack Query, NestJS, MongoDB, Docker, Railway, GitHub.

  Key Achievements:

  - **User-Centric Design:** Designed a minimalist, high-contrast interface with intuitive navigation, specifically tailored for farmers and users who are less tech-savvy.
